

08.31.23 TAP Release

Corrected an issue where the Overlapping Utilization report was not displaying any results for a child that was checked out at Program 1 and then was checked in at Program 2 at the same time. No providers were paid due to this overlapping attendance; however, the report was not reflecting this overlap.

Corrected an issue on the Sponsor>Detail page where the Sponsor Type field was only displaying a number and not the description of the sponsor type.

Corrected an issue that did not allow a program to submit back dated attendance when that service week included a Professional Development Day.

Corrected an issue where current school schedules could be extended into the next school year. Programs are required to enter a NEW school schedule for each school year.

Corrected an issue in KinderSign where the user was not being notified that there was pending attendance that needed to be approved when attendance for a later week had already been submitted for payment.
